

One of the most important symbols of Italy in the world has opened a museum to celebrate excellent 40-years long career, full of successes and revolutions. Giorgio Armani choose to frame all the clothes exposed in the exhibition with Tex, Tex Light, Liner and Cangiante metal meshes, which widen the chromatic and lightning qualities of the pieces to the surrounding space. Different meshes, made with different materials, for different clothes or accessories, straight, wringled or even printed, they compose a unique effect which makes the visit to Silos museum an incredible experience.
