

Our R&R 14x1 revisited in 14x4 for the Carpenteria E Montaggi project.

Approximately 240sqm of 316 stainless steel divided into panels and hung along a stretch of Provincial Road 84, direction Cevo (BS).

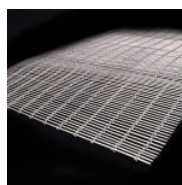

The canvas was purposely made with a larger surface opening so that it is possible to insert climbing plants to purely aesthetic completion of the structure created.

Not only efficient, but also fireproof, the 100% recyclable product is ideal for covering and cladding facades, giving total safety and sun protection.
