

At the Grammar School Yarra Valley in Australia, the architect in charge of the entire structure, chose to create a play of void / solid, with both horizontal and vertical blackout elements.
From the R&R 25x4 fabric used throughout its 4 meter width, trapezoidal elements have been obtained, masterfully tensioned on a perimeter structure in stainless steel.
The same solution was also adopted in other points of the facade to create a constructive continuity throughout the building.
