

10,000 square meter of wire mesh turned into pyramids of stainless steel give a new face to the incinerator of Giubiasco. Structure produced through a joint work between the companies: studied by Studio Vacchini architetti, produced by Gebrüder & Meyer, refined by our steel wire mesh cloth able to be adapted to every work. Thanks to our metal mesh the structure has:

- low solar energy storage in the baffle
- high acoustic noise reduction system
- low solar direct and total transmittance
- 100% recyclable product
