### RAIFFEISEN BANK PARAPETS

# R&R 25X4

A facade never seen before. Sinuous wavy lines recalling the waves of the sea make harmonics and functional the parapets of the Swiss bank Raiffeisen. This particular effect has been realized by R&R wire mesh, a product that permits spectacular natural and artificial plays on light, with innovative optical effects and original transparencies. This metal mesh has as warped ends a series of 4 cables distanced between themselves, whereas as weft are weaved rods with a fixed and constant distance. The mesh is rectangular with great lengthways flexibility, whereas transversally the rods give excellent rigidity because are placed laterally.

Product Used

**R&R 25x4**

Location

**Mendrisio - Switzerland**

Quantity

Usable Products

**R&R 14x1, Nemo**
