PORTFOLIO

ELEVATOR CAB VALDARO BUSINESS CENTER

The management complex of the Valdaro Business Center offers an advanced structure in its technological equipment, avant-garde services, but above all it has style and functionality.

To make these two characteristics concrete we find the Elevator cab made with R&R metal mesh.

This is a stainless steel wire mesh of the wide MetalDesign - Architecture range offered by TTM Rossi.

Thanks to its structure, this product boasts an easy application and thus becomes a valid option both for the realization of new projects and for the improvement in energy efficiency of existing structures.
