

PORTFOLIO

GLASS LAMINATED GREEN FRAME HOUSE

TEX LIGHT

The project presented by Astori DePontiAssociati during Abitare il Tempo in Verona was based on the recovery of abandoned shipping containers and turning them into real houses realized by the company ArtContainer and proposes an innovative concept of sustainable architecture. The setting gave ample use of wire mesh used for coverings and panels. Particular impact had the use of the product TexLight, that has taken a very ethereal effect and three-dimensional visual impact due to a light rubbing and integration between two glass panels.
