### CURTAINS SHOWROOM SKILLART

# M&M RIO

For the exclusive exhibition space in Milan, dedicated to the universe of design and applied arts, Diana Zanè chose Rossi wire mesh. In particular, for enhancing and shielding the windows of the open-space on two levels, she installed curtains realized in mesh M&M RIO, a knit fabric created by thin metal wire of copper, brass and steel. The warm colors and the brilliant nuances that characterize this metallic fabric made it possible to create an unique atmosphere: precious and sought-after as the objects displayed in the gallery.
