CEILING ALBERGO DELLA SALUTE

MINI RIVER

In the restyling project of Albergo della Salute in Val Taleggio - BG, the architect Alberto Sala has chosen to use natural materials with low environmental impact.

The panels in metallic fabric Mini River, used to cover the entire ceiling of the reception area in order to hide wiring, have become important decorative elements.

The use of low lighting on the outer perimeter of the ceiling and the warm shades of bronze have led to a soft but at the same time brilliant luminosity, which gave to the entire room an atmosphere of calm and relaxation.
