### ELEVATOR CAB CLS COSTRUZIONI

# RIVER

A new apartment complex born in the heart of Milan, a modern structure on which it was required a product with multiple functions: parapet, sun screen, aesthetic element ... The choice could not be different than choose the River wire mesh weaved with stainless steel wires that reflect the sun's rays, creating a sunscreen providing an excellent visual effect and a remarkable richness of color. Thanks to its simple installation, it was not necessary to add special supports to the structure in the block scale while covering a very high surface.
