

## PORTFOLIO

### CEILING SHOPPING CENTER LITUANIA

Inside the Lithuanian mall IKI, the study Hota chose to mask the sprinkler system using panels of wire cloth River weaved with stainless steel wire, fireproof and with infinite longevity.

The same panels have been positioned vertically, fixed just to the top, so arranged as to visually create a luminous river, whose light is generated by the reflection of the neon above. River is a light and easy to install metal mesh, which gives a three-dimensional effect when panels are placed one behind the other.
