

PORTFOLIO

PANELS HOTEL ROYAL

To cover all the walls of each floor of the hotel Royal in Barcelona city centre, we created a special mesh, suited to the application in public as it's self-extinguishing.

We started from the basic texture of the product JUTA, but using a composite yarn with coated with a flame retardant product, which has the same aesthetic of natural jute yarn, but also it's resistant to high temperatures, mandatory requirement for hotel and public places.

The company Finsa then managed skillfully to tension all panels by hooking them to a frame and fixing it to the wall.
