

To create a discreet and functional partition in the great hall of the restaurant Barilla in Parma, it was decided to use a laminated glass divisor that enclose the wire mesh MiniRiver Bronze, chosen in the variant made entirely of bronze, a natural yarn with warm and bright reflections that blend in perfectly with the traditional style of the location. Laminated glass with metal mesh between two sheets of glass is customarily employed in the realization of dividers, wall coverings and furnishing elements such as tables, shelves and doors.
