

This kind of wire mesh has been chosen for this project for its characteristic of screen any window in any weather, giving a real thermal insulation of the façade, an effective resistance to wind and possible deterioration or lacerations caused by UV rays and smog. Flexy has also a good transversal rigidity but great flexibility in the lengthways has a good direction. Is a particular "free" plaited structure, with a self-adaptation to curves or irregular surfaces, it can be accumulated coil on coil for use in layers.
