

Ceilings Fiat Open Lounge

MetalDesign

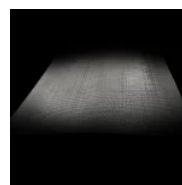

In Milan, the city of entertainment and design, the Fiat Open Lounge is characterized as an original urban garden, a contemporary setting sophisticated but casual at the same time. Enriched by a ceiling entirely made of metal mesh Cangiante Silver, the place is characterized as a researched area, in which the prevalence of white combined with red and shiny reflections of steel, creates an unique and charming atmosphere where lights and tissues stimulates our senses, creating a setting of great visual impact.
