

Elegance and refinement.

In the heart of Milan, the GMT boutique lights up Via Della Spiga thanks to the new installation of Metal Glaxy with our Aurora Gold and Diamante Gold, for a truly precious finish created by Arch. Marco Michele Rossi – Newton.

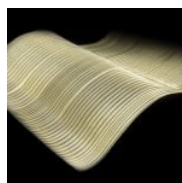

The glass stratification is a particular process customized according to the project with the best metal meshes that are most suitable for satisfying the final objective.

For this realization, the non-standard Diamond Gold mesh was created specifically for the customer so that he could complement the gold of the Aurora.
