

Crimpy: a balanced transparency, a structural product, with the right strength for a parapet. With the creation of stainless steel bearing frames, it was enough to secure and finish in the Crimpy product to create an innovative and modern parapet. This type of wire cloth born primarily for outdoor use in facade, it also makes possible the creation of panels with irregular and diagonal shapes. The mesh structure also composed with ropes, allows to put in tension the same mesh even with the use of top and bottom hooks.
