

"Shine bright like a diamond" into Moorer shop.

How is it possible? Thanks to the TTM Rossi wire meshes used to realize beautiful panels.

In this specific case has been chosen LINER Bronze, a wire mesh that due to its characteristics of lightness and open surface, it's an ideal product for glass lamination.

This particular application allows not only brilliant plays of light that can illuminate and enhance the clothes in the store, but also to protect the metal mesh making panels very resistant.
