

The Architect Marco Piva designs for years the windows of Bvlgari Shops in mayor european and world's capital cities, using TTM Rossi's metal meshes.

Even in the realization of Bvlgari's stand at World Watch and Jewellery Show 2015 in Basel (Switzerland), Architect Piva used M&M RIO fabric. The lower part of the stand is compoused by glass panels laminated with M&M RIO metal mesh and quadrants in glass with high definition marble reproduction which host the watches from Bulgari's new line.

The clever use of light on the metal mesh creates a shiny and precious effect which transforms the whole building into a great and majestic jewel.
