

The new directional buildings of Fiera Milano, a project won by 5 +1 AA study, where the soul of the building is accentuated by the vertical strip above the main entrance that was made with the wire mesh Liner glass laminated.
A clear choice, with the creation of a targeted product for this realization, where the protagonist is the product Liner wire mesh with stainless steel and brass wire.
This kind of wire mesh, very thin and malleable, thanks to the glass stratification acquires resistance and strength so in this way it can be used also as parapets, exterior facade, internal and external partitions...
